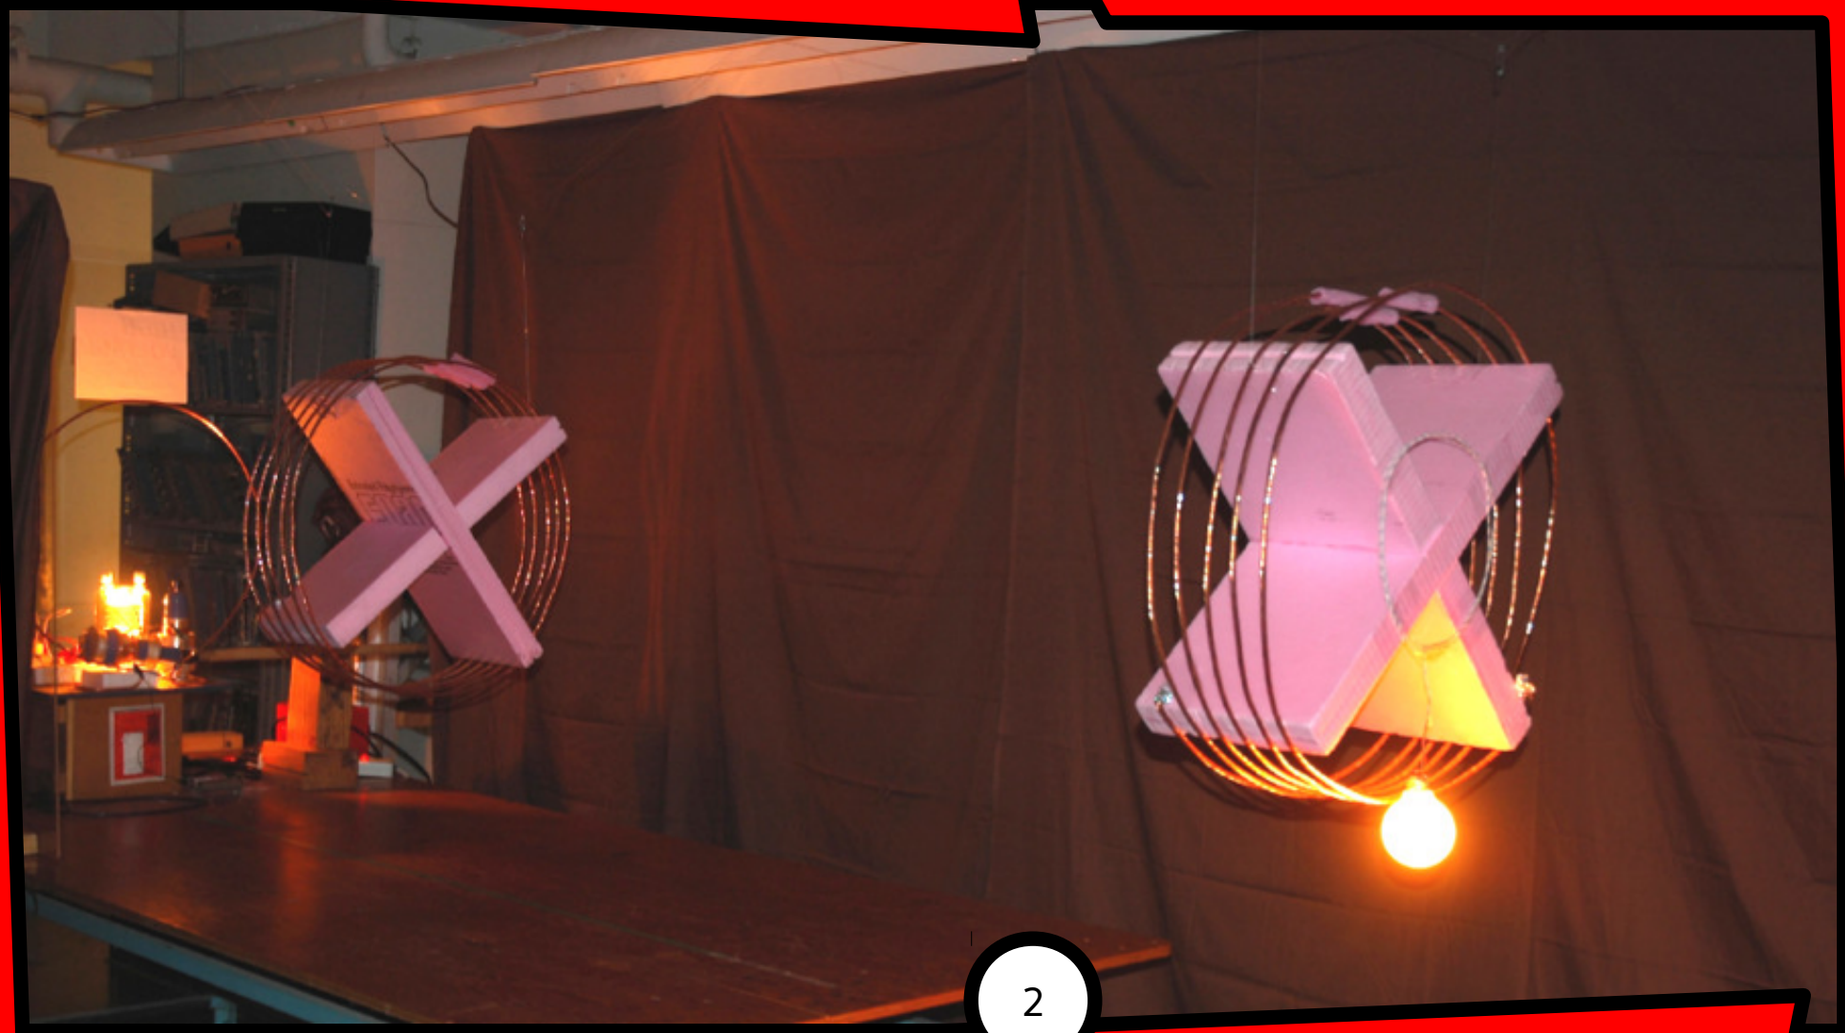
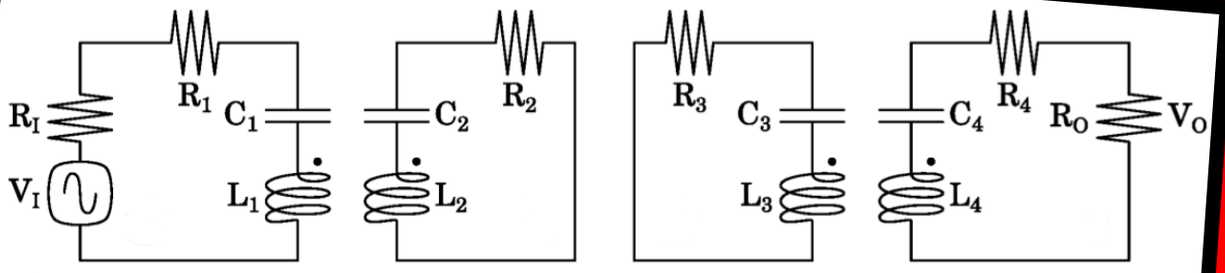
Resonant magnetic coupling (2007): 4 coils (largest diameter of 60 cm, cross-sectional diameter of 6 mm), a 60 W light bulb, distance of 2 m, efficiency of 40%

Balanced trade-off between efficiency, range, simplicity, size and power transfer capability





$$\frac{V_O}{V_I}=\frac{-jw^3M_{12}M_{23}M_{34}R_O}{M_{12}^2M_{34}^2w^4+Z_1Z_2Z_3Z_4+w^2\left(M_{12}^2Z_3Z_4+M_{23}^2Z_1Z_4+M_{34}^2Z_1Z_2\right)}$$

$$Z_1=R_I+R_1-\frac{j}{wC_1}+jwL_1$$

$$Z_2=R_2-\frac{j}{wC_2}+jwL_2$$

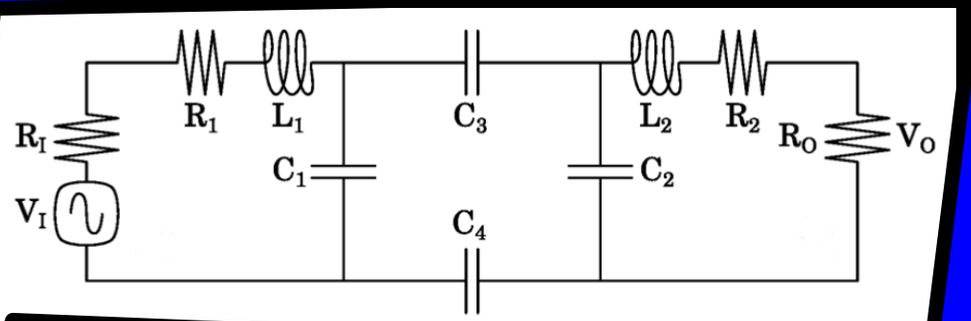
$$Z_3=R_3-\frac{j}{wC_3}+jwL_3$$

$$Z_4=R_O+R_4-\frac{j}{wC_4}+jwL_4$$

$$M_{12}=k_{12}\sqrt{L_1L_2}$$

$$M_{23}=k_{23}\sqrt{L_2L_3}$$

$$M_{34}=k_{34}\sqrt{L_3L_4}$$



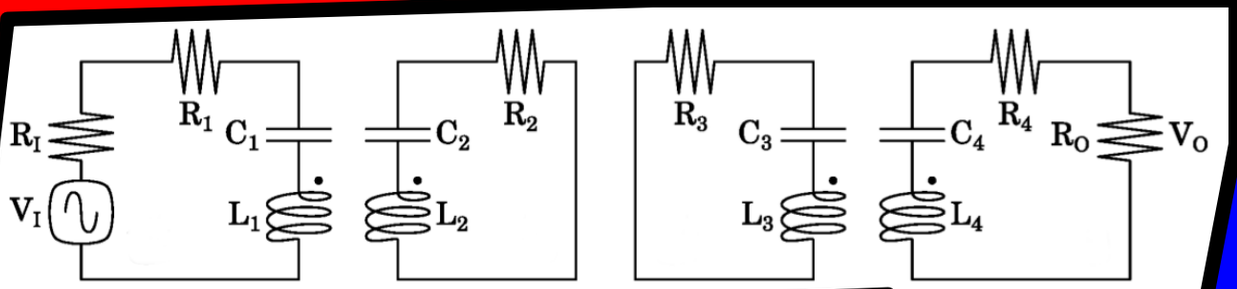
$$\frac{V_O}{V_I} = \frac{R_O Z_3}{Z_1 Z_2 \left(Z_3 \left[jw(C_1 + C_2) + \frac{1}{Z_1} + \frac{1}{Z_2} \right] - w^2 C_1 C_2 + jw \left[\frac{C_1}{Z_2} \frac{C_2}{Z_1} \right] + \frac{1}{Z_1 Z_2} \right)}$$

$$Z_1 = R_I + R_1 + j w L_1$$

$$Z_2 = R_O + R_2 + j w L_2$$

$$Z_3 = jw \frac{C_3 C_4}{C_3 + C_4}$$

Available power gain: $\frac{P_O}{P_A} = \frac{4 R_I}{R_O} \left| \frac{V_O}{V_I} \right|^2$



Parameter	Value

Conclusions:

Systems based on resonant magnetic coupling are currently very popular in the literature, systems based on resonant electrical coupling are not;
The duality between resonant magnetic coupling and resonant electrical coupling is quite noticeable;
It was not yet possible to obtain a complete match between experimental results and theory, but some key aspects were confirmed.
